

Fixturlaser Press Information 2012-07-17

New Employee at Elos Fixturlaser AB

Elos Fixturlaser AB continues to develop its operations and has recruited Jaak Ekman as production engineer. Jaak will primarily function as a link between the production department and the R&D department, i.e. to support the production with production equipment. He will also develop test equipment for our suppliers. Jaak has an extensive experience of working with measurements, using laser based and hand held tools, and will therefore bring a wealth of relevant experience to his new role.

Elos Fixturlaser AB develops, manufactures and markets laser based measurement instruments for alignment and positioning of rotating machinery. Our measurement systems are user friendly tools that minimize the number of operations involved in the alignment process – "Express Alignment by Fixturlaser".

They come with the basic precision alignment applications and functions, such as horizontal and vertical shaft precision alignment, compensation for soft foot, bolt and base bound situations, and with optional applications, such as alignment of machine trains and of offset mounted machines, measurement of dynamic and thermal movements.
